

Audit Trail

Comprehensive Audit Trail Solution for your share point Applications

What is Audit Trail?

An audit trail (or audit log) is a security-relevant chronological record, set of records, or destination and source of records that provide documentary evidence of the sequence of activities that have affected at any time a specific operation, procedure, or event

Why Audit Trail?

Many a time systems wants to track data change for the particular SharePoint application, by default SharePoint does not provide information like what has been changed to what, it just provides the information as something has been changed as a result of certain operation.

Solution

PositiveEdge SharePoint Audit Trail Component offers a complete solution with the following features

- Comprehensive data change logging
- Configurable archiving of audit datasets

Below are few of the offerings:

- Comprehensive Solution for logging in data changes
- Can audit OOTB and custom data entities (Lists, Document Libraries, Document Sets)
- Data changes include differential column wise change for inserts and updates
- Deletes are logged using the item ID
- User information sends the timestamp
- Document version change in a document lib
- Supports Attachment tracking
- Report can be generated based on data tracked.

Highlights:

- It archive audited data as soon as size of audited data grows to a certain threshold.
- It can be distributed as a .wsp file.

Technology:

- It uses SharePoint 2010.

Applicability/Usability:

- It can be used where the Application require Data Monitoring.
- It can be used in applications which handle the sensitive data and require tracking for each and every change of the data.
- SharePoint specific application can use this.

Scope:

- It supports only SharePoint 2010 application.

Benefits

- Easily Implementable
- Structured Audit data logging
- Reports can be generated based on logged data
